

MACHINE KNIVES

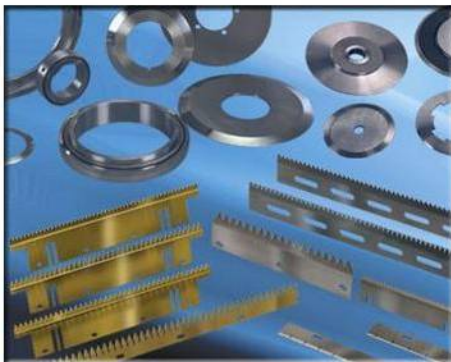

Our Machine Knives are manufactured from high-performance tool steels with accurate flatness standards and exceptional tooth profile consistency for precise cutting performance that produces an extraordinary package appearance.

Cutting edges available include serrated, perfed and beveled edges EZ Open and cross cut tooth forms and optional tear notches. Blade configurations include straight, circular and formed tray punches for vertical form fill and seal baggers, pouch, sachet and portion packaging, shrink wrappers, overwrappers, rollstock and vacuum packaging and automatic tapers.

Tool steels available include standard carbon, high carbon, high chrome for wear applications, high speed steel for long life and stainless for corrosive resistance properties. Special coatings are available for increased wear resistance and non-stick properties.

Our knives are manufactured to meet or exceed OEM specifications. Technical assistance is available for special and customized configurations and applications.
